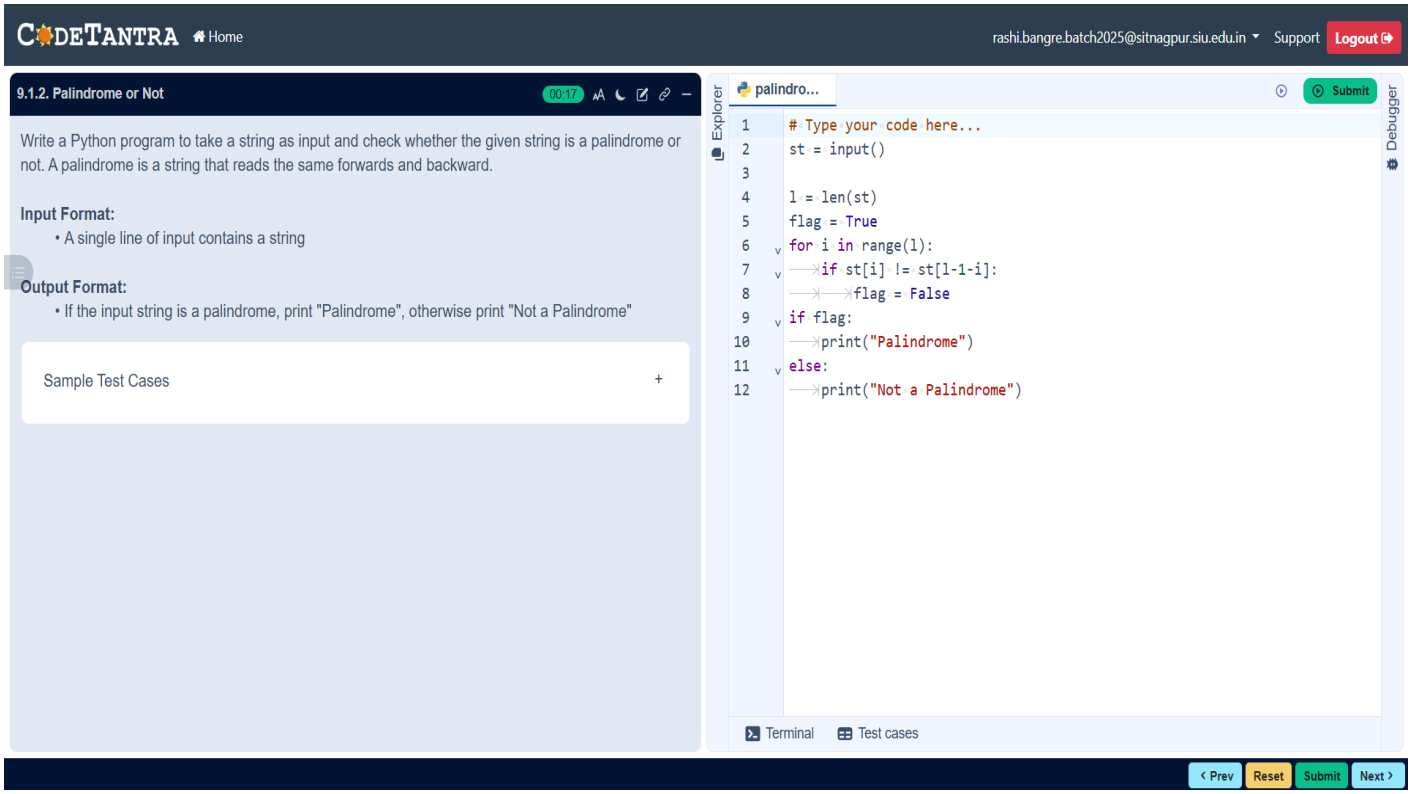
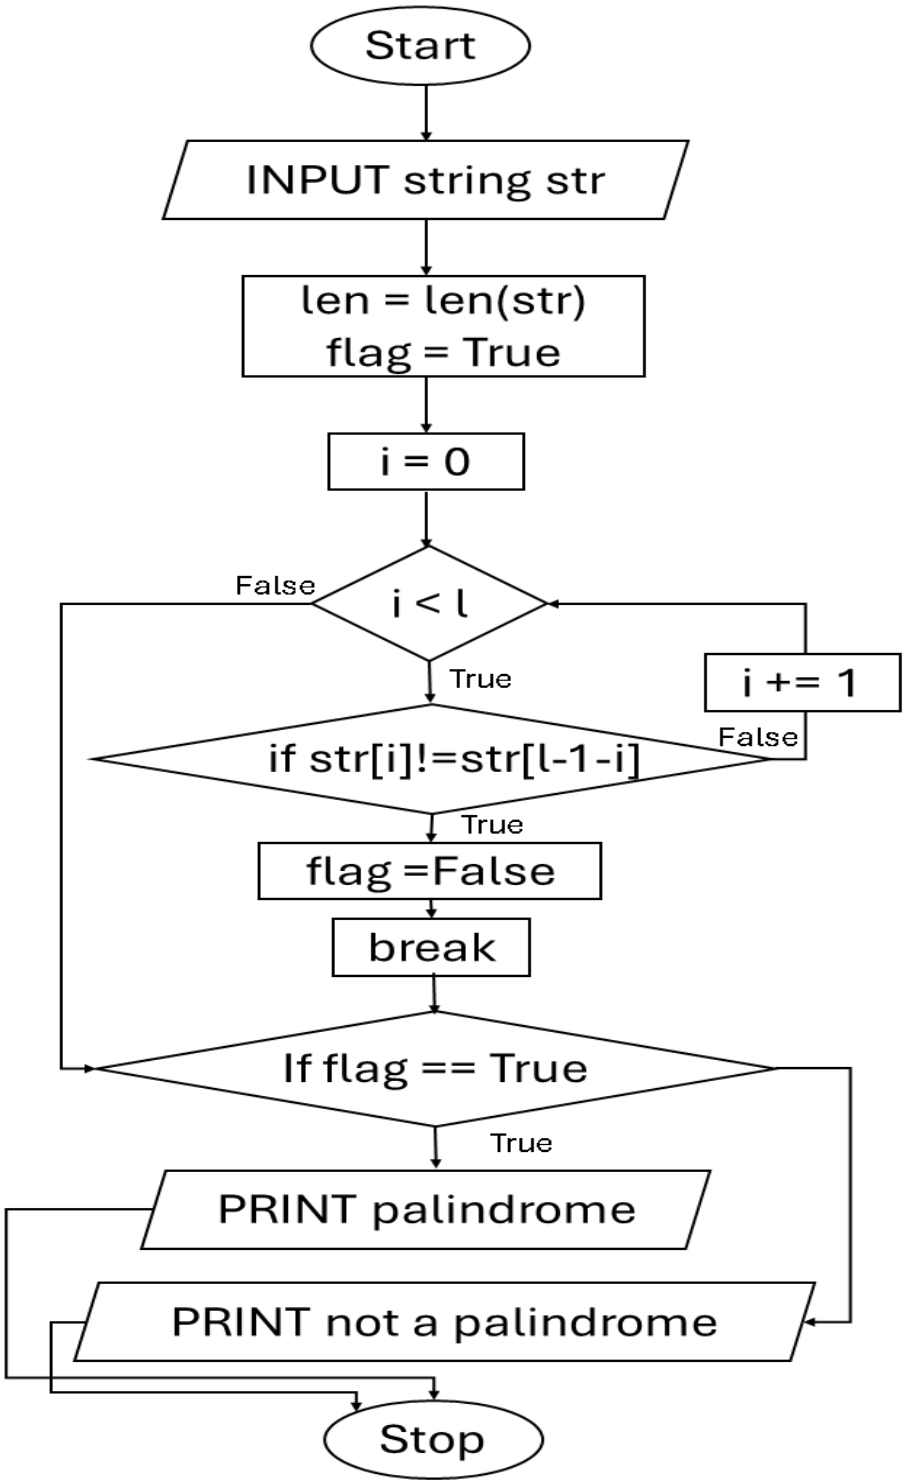
9.1.2. Palindrome or not

ALGORITHM

Step 1 : Start
Step 2 : Input string str
Step 3 : Find length of string and store in l
Step 4 : Set flag as True
Step 5 : Repeat steps for each position from start to middle of string
Step 6 : Compare character at beginning with corresponding character from end
Step 7 : If both characters are not equal, set flag as False
Step 8 : After completing all comparisons, check flag
Step 9 : If flag is True, print "Palindrome"
Step 10 : Else print "Not a Palindrome"
Step 11 : Stop





Start
INPUT string str
len = len(str)
flag = True
i = 0
i < l
False
True
i += 1
False
if str[i]!=str[l-1-i]
True
flag =False
break
If flag == True
True
PRINT palindrome
PRINT not a palindrome
Stop
