# 10.1.2 Reverse String

## ALGORITHM

**Step 1 : Start**

**Step 2 : Input string and store in user_string**

**Step 3 : Set result as an empty string**

**Step 4 : Find length of user_string and store in l**

**Step 5 : Set i = l - 1**

**Step 6 : Repeat steps while i is greater than or equal to 0**

**Step 7 : Get the character at index i from user_string**

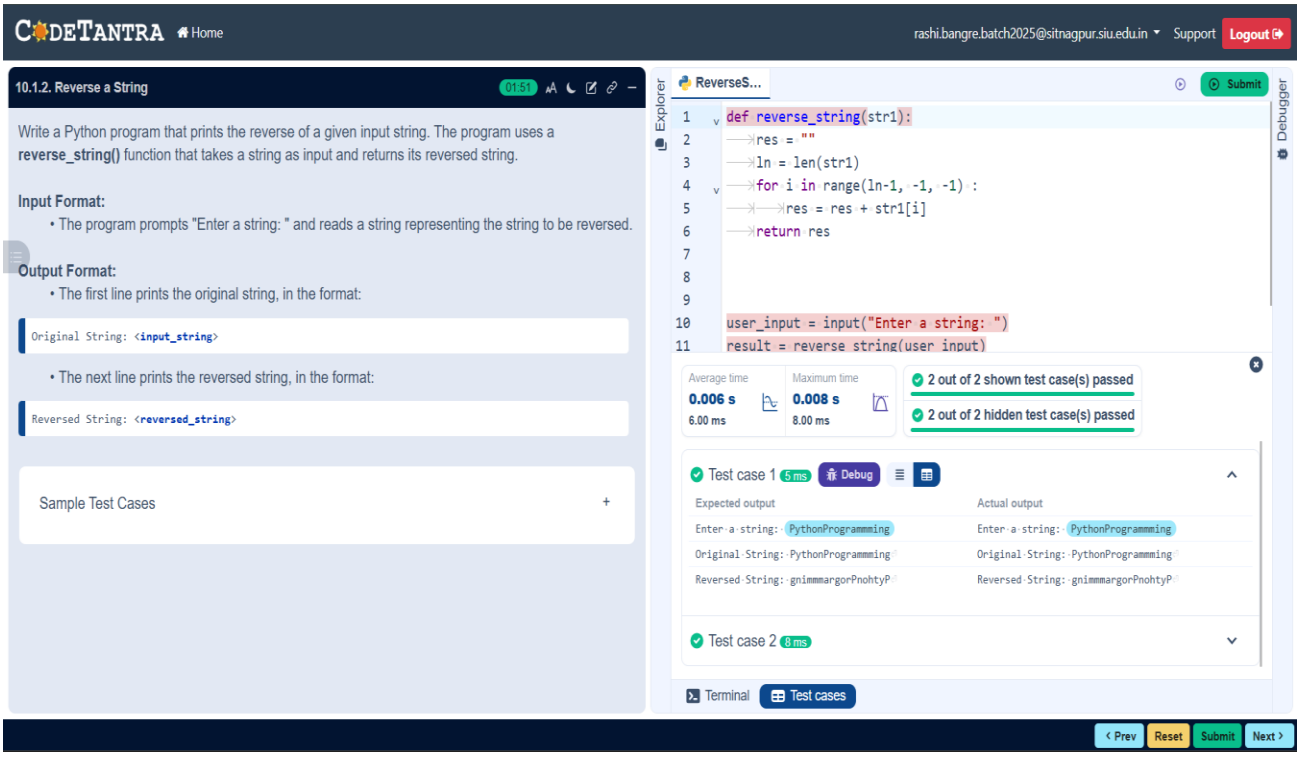
**Step 8 : Add the character to result**

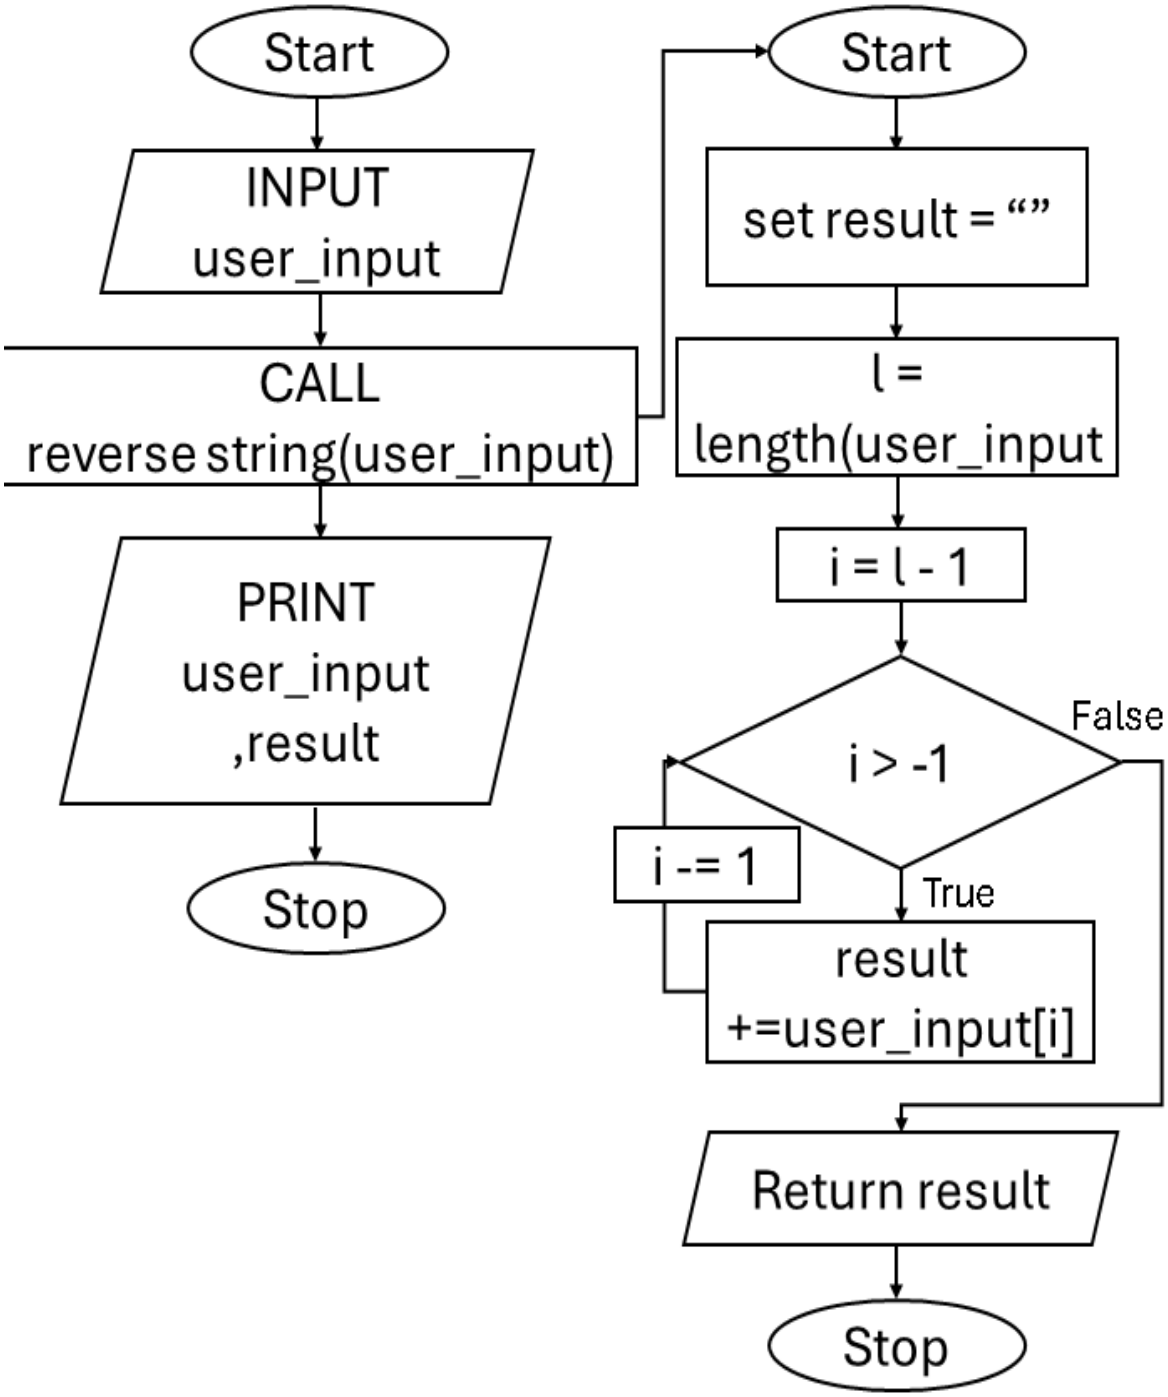
**Step 9 : Decrease i by 1**

**Step 10 : Go back to Step 6**

**Step 11 : Print result**

**Step 12 : Stop**





Start
INPUT
user_input
CALL
reverse string(user_input)
PRINT
user_input
,result
Stop
Start
set result = “”
l =
length(user_input
i = l - 1
i > -1
False
True
i -= 1
result
+=user_input[i]
Return result
Stop
